Microbiological Testing

18/10/2005

Dear Sir or Madam:

In recent months the P.W.T.A.G “Pool water treatment advisory group” and PAS 39:2003 “management of swimming pools” have been moving for water in school swimming pools and public spas and pools to be tested more thoroughly. This will involve sending a sample away for detailed microbiological testing at regular intervals to determine the full condition and safeness of the water. If the water contained a high amount of ‘Pathogens’ such as E.coli or Staphylococcus the pool could be closed. Under Health and safety legislation, **pool managers are at risk of prosecution** if they do not take all precautions to minimise the risk of public exposure to harmful bacteria whilst using their pool. We are also able to test for Legionella.

We are aware that the service could cost up to £140 and the results could take up to 14 days to come back, by which time the damage could be done. We would like to offer the same service for a much lower price and give a friendly personal approach. We will be able to return the results to you in little more than a day, and make any necessary adjustments to the water, preventing any hazard to your self or the public and importantly the pool or spa remains open!

Testing has to be done at least monthly and any time a known contamination occurs. All test are carried out by a UKAS accredited lab and meet with PWTAG & BSI Code of practice PAS:39 The pools we test will be given a notice to display to the public stating the water is tested regularly for their safety. Our price for a full 14-point water analysis and microbiological test is just £68.00
The results are printed showing clearly what action is needed to keep your pool in perfect and safe working order.

We have been maintaining swimming pools for many years providing a prompt and efficient service. Using only premium chemicals and equipment you can rely on us to keep your pool sparkling and safe. We are sure that we can dramatically reduce your chemical bills and running costs, and can provide full references if required.

As an introductory offer we will carry out a 12-point water analysis **free of charge**.

If you would like to discuss any of the above please do not hesitate to contact us one of the above numbers.
